DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement filed 12/29/00 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each U.S. and foreign patent; each publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

Drawings

2. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference sign(s) not mentioned in the description: page 31 lines 6 and 15 the printed circuit board 2810 is not found. Correction is required.

Claim Objections

3. Claim 61 objected to because of the following informalities: line 10 the word "first" should be eliminated. Appropriate correction is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 2858

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 61-64 are rejected under 35 U.S.C. 102(b) as being anticipated by Eldridge et al (US 5974662).

Regarding claim 61, Eldridge et al disclose a socket or probe card assembly comprising

A first plurality of resilient contact structures (524, 516, 514) extending upward from a top surface of a support substrate (534), the first plurality of resilient contact structures (524, 516, 514) for communicating signals with a first plurality of contact points (526) of the first electronic component (508);

A second plurality of resilient contact structures (524, 516, 514) extending upward from a top surface of a support substrate (534), the second plurality of resilient contact structures (524, 516, 514) for communicating signals with a second plurality of contact points (526) of the second electronic component (508);

A plurality of contact structures (514) disposed on a bottom surface of the support substrate (534), selected ones of the contact structures (514) are connected through the support substrate (534) to selected ones of the resilient contact structures (514).

Regarding claims 62, 63, Eldridge et al disclose the second electronic component is a circuit board (508)

Regarding claim 64, Eldridge et al disclose the socket means for urging the first electronic component (508) down onto the first and second resilient contact elements (524, 516, 514).
